## Ex 2

The Q-Q-plot shows the distribution appears skewed.

## Warning: Removed 1 rows containing missing values (geom\_point).

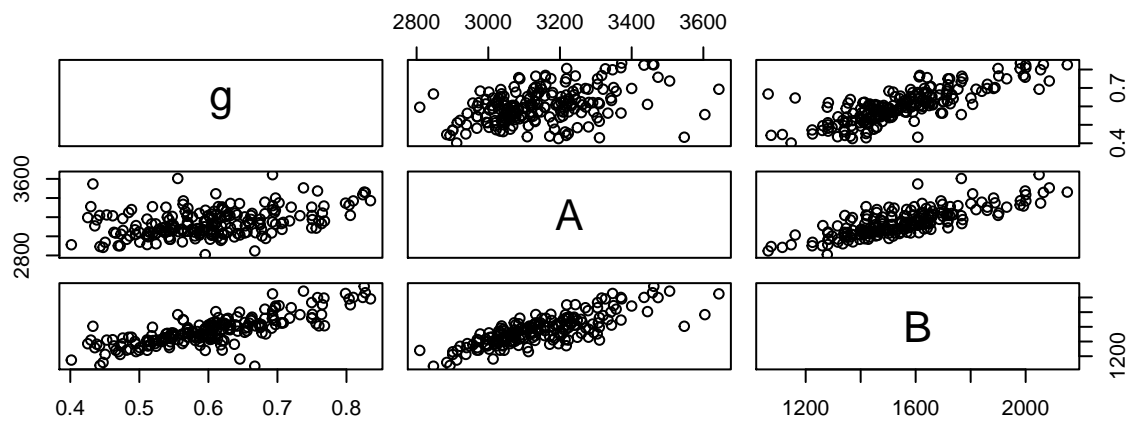

I estimated A to be 3149.2682402, B to be 1558.7168469, g to be 0.5975776.

```
##           g           A           B
## lower 0.4501273 2906.356 1220.863
## upper 0.7545191 3377.575 1879.350

##           g           A           B
## g 1.0000000 0.4096526 0.7977789
## A 0.4096526 1.0000000 0.8001422
## B 0.7977789 0.8001422 1.0000000
```

The transformed data looks less skewed.

### Ex 3

The data appear to be long-tailed compared to Gaussian.

```
##           h           A           B
## 0.2065645 29.9200000 2.9674945

##           h           A           B
## lower 0.1224548 29.61813 2.466980
## upper 0.2537641 30.37317 3.530826

##           h           A           B
## h  1.0000000 -0.2540256 -0.5489236
## A -0.2540256 1.0000000 0.1272925
## B -0.5489236 0.1272925 1.0000000
```
